▼ About ICB

ICB Innovative Chemie für Industrie und Umwelt GmbH & Co. KG was founded in 1990. In the successful years that followed ICB consistently expanded its business operations and established itself as a reputable medium-sized company.

The sustained growth required the construction of the new business premises in 1998, including production and storage facilities, a modern laboratory and an administrative wing. In 2004 the extension of the production and storage facilities as well as the extension of the staff facilities followed.

Today ICB has production and storage facilities that stretch over more than 2.500 m² and has an annual capacity of more than 3.000 tons of chemical products. The research and development team and the quality assurance team work in modern laboratories that stretch over 300 m². Comfortably furnished staff rooms contribute to the pleasant working environment.

The good working conditions at our company are an important prerequisite for the development and production of sophisticated products for ambitious customers. We will find individual solutions and can customize our products to serve the needs of our customers.
